

# Contura

INSERTS AND CASSETTES

A warm  
welcome home

There is nothing cosier than a real fire. Anyone who lives where there is an autumn, winter and spring knows this. But the heat from a fire is not just a cosiness factor that triggers deep feelings of safety and community. It is also a clever and modern solution that maximises both your and nature's resources.

A fireplace from Contura will spread warmth and cosiness in your home for many years to come. Therefore you should choose carefully. We make Contura for those who appreciate good design, intelligent functions and a wide choice. We make fireplaces for those who choose with the heart and the head.

## You and Contura on social media

You can start your relationship with your Contura even before you visit a store to see and touch, to open and close doors, to pull dampers and otherwise explore Contura stoves using all your senses.

### Contura App – easier to choose a stove at home

The easiest way to get an idea of what your favourite models will look like in your home is to download the Contura App from the AppStore or Google Play. Choose a model, position it in the room using the camera and take a photo. Contura App produces an image of your home with a Contura.

### Facebook – you ask, we reply

Many of our customers turn to Facebook for quick tips and advice about everything to do with stoves and chimneys. We respond quickly to your posts and there are a number of interesting threads among the posts. We also love it when you post pictures of your Contura. See [facebook.com/contura](https://facebook.com/contura)

### Youtube – see new features and tips

On Youtube you can find films of our models, new features, exhibitions, manufacturing etc. You can also find our video hits: How to best light stoves and cassettes. Go to [google.com/ConturaSeKamin](https://google.com/ConturaSeKamin), or search for Contura on youtube.com

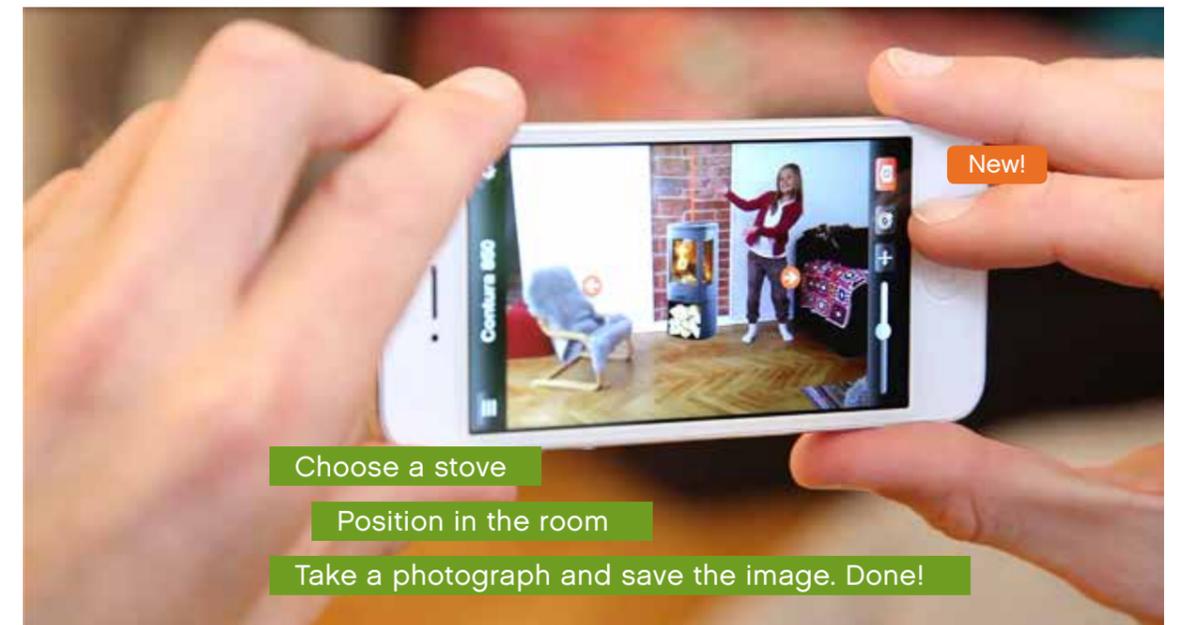

### Spotify – for those wonderful moments by the fire

For many of our customers music is almost half the experience of relaxing by the fire. If you are one of them, listen to our playlists on Spotify, music for wonderful moments. You can even add tracks to our open playlist, created by you and others like you that like Contura. Search for "Contura" in Spotify.

A painting we never  
get tired of

The insert in our new chimney breast is like a brilliant and vivid painting. It is high up, so that the fire can be seen throughout the room. We never get tired of it, it is just as good after the fire has gone out and we sleep soundly in the lingering heat from the chimney breast.

A bridge between traditional  
and modern design.

I have a passion for tradition and go mad at flea markets and in antique shops. Why buy new and mass-produced, when there are so many beautiful, old things of much better quality? There are limits however, our forefathers were not better at everything. How lucky then that it is possible to combine good, old tradition with new and better technology, without losing the classical expression.

## A tangible difference

Our stove insert really makes a difference to the heating, so we light a fire nearly every day. With the large glass, it was perfect for our functioning stove. A lot of people think that it has always been there.

Contura i5, double doors

Sanctuary in the  
upgraded lounge

The lounge was the first thing that we renovated when we moved in. It was the best thing that we did, now we have a real sanctuary as we rebuild other parts of the house. We gather around the fire and the stove has just become more attractive with an insert and a grille.

Contura i6, frame and door in glass, black handle

Save with style

When we found the Contura i6, the decision to renovate the old masonry stove was made easy. Now we have a design that suits us, as well as a lovely fire that gives heating and saves money.

Contura i6, frame and door in cast iron

## New ideas with rustic influences

We wanted the stove to be at the heart of the house and we lit up, if you will pardon the expression, when we could have a masonry stove exactly as we wanted it. The rustic looks on the outside with modern, efficient technology on the inside suit us perfectly.

Contura i11S low

"The fire and the view are like a magnet. We are here. All the time."

For a family who live in large open spaces, the fireplace was the icing on the cake. A precast concrete surround with black front matched the interior decor and the architecture best. It took just a few days. Then family then had a piece of furniture that radiated heat, light and long-awaited cosiness – and which also eliminated the division between the room and the terrace. This is where they spend most time, outside or inside and looking at the sunset, playing with the kids, spending time and eating together. All in the warmth and beautiful glow of the fire.

Comfort with attitude

We do everything here in our old industrial premises - work, live and entertain friends. We wanted to create a sense of comfort but maintain the industrial connection, and the jet black chimney breast with the attractive flames feels like a forge. It is comfort with attitude.

All in one, just like the room

The masonry stove was the ideal way to tie in and at the same time divide the large space that is both kitchen, dining area and living room . Insert and natural stone in one, easy to install and ready for a fire Perfect!

## The feeling of an open fire

The fireplace could fill the width, but we wanted maximum space in front. With this solution we have a lot of fire, a lot of light and a lot of space.

# You choose a warm friend for life

Are you considering upgrading your open hearth with a cassette or a completely new fireplace? If so, you have come to the right place. Regardless of which Contura you select, you will get an efficient heat diffuser that will both give pleasure and save money on heating bills.

## Choose design

Fireplaces from Contura are appreciated because they show so much of the fire. This makes many of the models easy to position, even in confined spaces. Thanks to the large glass areas, in most models the flames can be seen from at least three sides.

## Different types

How much of the heating will the fire be responsible for? Is there a chimney breast or will a new chimney need to be installed? Is the old masonry open fire to be made more efficient? Do you want a new masonry stove but do not have a chimney breast? We have a solution for every need.

## Personal style

With our accessories you can give the fireplace your own personal style and adapt it to your interests and needs.

All accessories are made by Contura for Contura and fit the fireplaces perfectly.

FINNED GRILLE  
GIVES A MODERN  
IMPRESSION

# 12 properties your fireplace needs

- 1 High flame visibility.** Several of Contura's models have generous glass areas that display a lot of the fire. Our symbol for flame visibility indicates how much flame a particular model displays.
- 2 Cast iron door.** In order to resist the stresses that arise with the large temperature variations, the door must be made from shape-retaining cast iron.
- 3 High level of efficiency.** The efficiency is the relationship between the energy the stove gives off and the energy that is supplied in the form of logs. Contura fireplaces have an efficiency of up to 81 %.
- 4 Swedish made and guaranteed.** Contura fireplaces are high quality Swedish products developed and manufactured by NIBE Stoves. With a five year factory warranty and good service you can rest secure for the service life of the stove.
- 5 Clean Burning System.** The combustion air is heated to extremely high temperatures and flushed out onto the inside of the glass, which prevents soot build-up. This ensures that the fire is always visible in the room.
- 6 Powerful convection.** The cool room air is drawn into the stove from underneath, is heated and rises. Just a few minutes later the hot air flows out into the room.
- 7 Swan labelled and CE marked.** Most Contura products are certified in accordance with SIS Miljömärkning AB's quality mark – the Swan. All are CE marked, which guarantees a safe product.
- 8 Simple to use.** Contura products are equipped with a single control for exact output regulation, which allows simple and precise combustion control. The door, grates and ash-pan are also easily accessible.
- 9 Suitable for Premodul chimneys.** The Premodul chimney system is suitable for all our stoves and inserts. It is a fireproof, CE marked product that is available for all types of connection.
- 10 Flexible.** Contura is available in a number of variants and models. You can install a completely new stove, integrate with the existing chimney breast or stove and most importantly find your own style.
- 11 Heat retention.** For maximum efficiency in heating, it is possible to choose fans and different heat retention properties for several of the Contura models.
- 12 Many options.** Supplement with one or more options such as a powerstone heat tank or finned grille.

# Cassettes for both old and new fireplaces

An open stove is both cosy and pleasant, but unfortunately it does not give off much heat energy to your house. An open fire sucks the heat out of the room and you are literally only heating the birds. With a cassette you can create your own style and get better heating economy, guaranteed. You can design your own fireplace or simply use the cassette to adapt the existing fireplace.

With Contura cassettes you can retain existing style, or create a more modern impression. Whatever you choose, you get natural heating with modern combustion technology and generous areas of glass showing a lot of the fire. The Clean Burning system keeps the glass clean and the flames visible.

Contura is manufactured with the latest technology, which means that it is very energy efficient. The fireplace is easy to light and reaches full output within a few minutes. All Contura products are thoroughly tested so that you can light with a clear conscience and a great deal of pleasure.

## Harness the heat!

With a modern fireplace you eliminate the risk of lighting a fire just to heat the crows. Efficient combustion technology and air system mean that the surrounding air is heated and then flows out into the room. Traditional open fireplaces consume heated room air instead and let it flow out through the chimney.

## CONTURA i4 Modern

### Attention to both design and technology

Contura i4 Modern with three sided frame in modern design that blends easily into your home and is easy to position in the fireplace.

## In a fireplace recess

Contura i5L has additional cast iron legs for positioning in a fireplace recess.

CONTURA i6, glass door

CONTURA i6, cast iron door

## With choice built in

Contura i6 has three different doors to choose between, so that you can have the feeling and impression that you want in your home. It is self locking to give you extra safety. We have also integrated technical finesse into the insert, such as adjustable screws to help level the insert and prepare for outside air and to make installation as smooth as possible.

## Style for every environment and heating for the prudent

Contura i6 is the ideal choice for those who have their own ideas of what a masonry stove should look like and want to build a new fireplace. Choose the impression you want to give with a completely glass door or a cast iron frame.

<b>Output</b>	<b>3-9 kW</b>
<b>Nominal output</b>	<b>5 kW</b>
<b>Efficiency</b>	<b>78%</b>
<b>Co</b>	<b>0,1 %</b>
<b>Height</b>	<b>504 mm</b>
<b>Width</b>	<b>593 mm</b>
<b>Depth</b>	<b>403 mm</b>
<b>Weight</b>	<b>92 kg</b>
<b>Wood length</b>	<b>35 cm</b>

## Which door do you choose?

### Door with cast-iron frame

On this door the glass has a cast iron frame with a recessed cast-iron handle. The insert frame is cast iron.

### Glass door

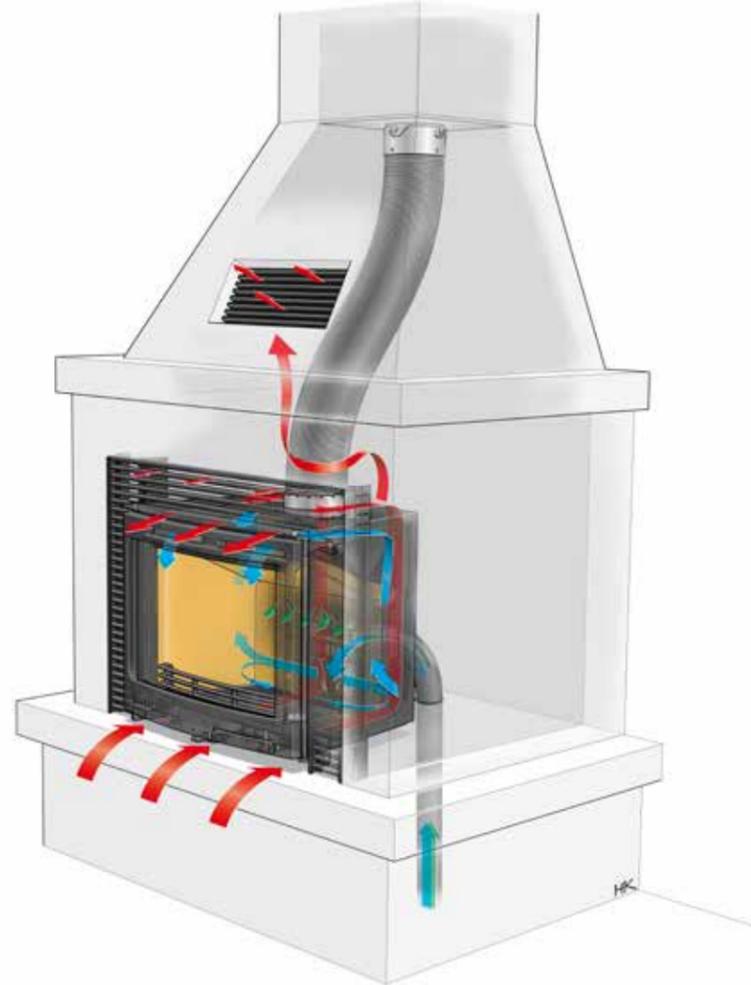

This door is all glass with a recessed handle of black cast iron or brushed steel. The insert frame is glass.

# Contura i5, efficient heating at all times

A Contura insert has a unique system for the supply of air that controls the intensity and heat of the fire. Combustion is even and efficient, which means that the smoke that is released contains extremely small amounts of particles.

The technology is based on the three flows of air working together inside the firebox via one damper. The fireplace is supplied with the correct amount of air, in the right place, regardless of the position of the damper.

## EFFICIENT AIR FLOW

The room air (red arrows) flows into the stove through the air intakes on the sides. It is heated in ducts above the firebox and flows out again as hot air from the top of the stove.

## PRIMARY AIR

The supply of primary air (blue arrows) is constant regardless of the damper position. All air for combustion can also be brought in via an air duct (option).

## CLEAN BURNING SYSTEM

The tertiary air (green arrows, Clean Burning) is also controlled by the damper. Clean combustion is achieved thanks to the three flows of air working together.

# Good design from the inside out

## Cast iron door

The cast iron door gives the stability and heat tolerance required. Choose between a modern panorama door or classic double door.

## Hood cover

The hood cover gives the insert a smart look and creates an extra flow of convection air, which means better heating economy.

## Integrated handle

The door opens easily using the inset handle at the lower edge of the cassette.

## Easily accessible controls

Quick heating with high temperature or slow heating with lower combustion? Choose yourself, the output is easy to control.

## Large glass areas

The largest possible glass surfaces enable the fire to be seen clearly. A two chamber damper means that the insert burns cleanly and the glass is kept soot-free.

## Elegant finned grille

Stove openings larger than the dimensions of the insert can be concealed by a matching finned grille. This is easy to cut to the perfect size and install.

## Outdoor air connection

Contura i5 can be supplemented with a supply air kit. The combustion air is then taken from outdoors.

## Chimney connection

A flexible, stainless steel, connection kit adapted for the product is available as an accessory for safe and functional connection to the chimney. It allows connection to the chimney before the insert is lifted into place.

## Legs

Contura i5 can be supplemented with short legs.

# Easy to fit, easy to like

Contura i4 is available in three versions: Modern for own recessing and Classic and Modern for installation in existing hearth opening. The inserts consist of a convection box and a firebox. The convection box is easy to install, adjust and connect to the chimney, either straight up or at a 45° angle diagonally backwards. It is

also possible to connect outdoor air for combustion. The firebox is docked inside the box and can be lifted out without affecting the chimney installation. Efficient convection technology makes heating quick.

Contura i4 Modern

Contura i4 Modern

Contura i4 Classic

**Four sided frame**

For own recessing. Rectangular cast iron frame (635x490 mm) with removable handle. Damper at the upper edge. Grate and ash-pan. Black or grey.

**Three sided frame**

For installation in fireplace openings. Three sided cast iron frame (590x490 mm) with removable handle. Damper at the upper edge. Grate and ash-pan. Black or grey.

**Classic**

For installation in fireplace openings. Cast iron front (600x490 mm) with integrated handle. Damper at the upper edge. Grate and ash-pan. Black.

# Style and output for every environment

The Contura i5 is designed to be installed in existing open fireplaces. Choose between panorama or double door and grey or black paint. The insert is easy to install, adjust and connect to the chimney, either straight up, straight back or at a 45° angle diagonally backwards. It is also

possible to connect outdoor air for combustion. The insert can be lifted out without affecting the chimney installation. Efficient convection technology gives rapid heating, that is easily controlled using the controls below the door.

Contura i5 panorama door

Contura i5 double doors

## Bowed

For installation in fireplace openings. Fits most open stoves. The handle is integrated in the door and the damper control is easily accessible on the front. Black or grey.

## Double

For installation in fireplace openings. Suitable for most open fireplaces, but particularly corner stoves where support bars are used and large doors can prove difficult. The handles are integrated in the door and the damper control is easily accessible on the front. Black or grey.

# Inserts

Realise the dream of a crackling fire! With inserts from Contura you have a number of possibilities. You can design your own fireplace, build with our precast concrete modules or install an insert and masonry in one.

Choice is the key word here at Contura. Therefore you often have the option choosing different stone materials, doors with glass or cast iron and different types of handle. You can paint our pre-cast concrete modules any colour you like. Whatever you choose, you get natural heating with modern combustion technology and generous areas of glass showing a lot of the fire. The Clean Burning system keeps the glass clean and the flames visible.

Contura is manufactured with the latest technology, which means that it is very energy efficient. The fireplace is easy to light and reaches full output within a few minutes. All Contura products are thoroughly tested so that you can light with a clear conscience and a great deal of pleasure.

## Build in heating!

A modern fireplace with generous glass gives you the sensations of the fire, at the same time that you use the energy to heat your home.

i11S

## Contura i10 and i20

A Contura insert is a modern open fireplace, a piece of furniture with attitude, a sculpture if you will. It is designed for large rooms and for busy social lives, consisting of clean lines, glass and concrete. New Contura gives you a fireplace that can match both the interior and architecture. You can choose to cement in the insert yourself or use our precast modules to install your fireplace within a few days.

Start with the actual insert (i10 or i20) and then decide how you want the concrete surround to look. Ask your dealer what you need for the functions you want.

i10

## Contura i10

Contura i10 is a model with a broad door. The slides open upwards using the handle at the lower edge.

Output	6 - 12 kW
Efficiency	81 %
Weight	215 kg
Height	1315 mm
Depth	515 mm
Width	785 mm
Wood length	53 cm

## Contura i11C

Generous masonry stove with Contura concrete modules. Paint it any colour you like. Contura masonry stoves can be connected to Premodul chimney systems for those of you who do not have a chimney breast.

Dimensions with concrete surround.

	Height	Width	Depth	Weight
i11C	1620	1050	620	470
i11S	1620	1050	620	450
i11A	1620	1050	620	450
High module	685			100
Log box	465	610	620	135

i11C

# CONTURA i20

i21C

i20

## Contura i20

Contura i20 is the model with the tallest door. The slides open upwards using the handle at the lower edge. There is space for big logs.

Output	6 - 12 kW
Efficiency, up to	81 %
Weight	240 kg
Height	1535 mm
Depth	515 mm
Width	685 mm
Wood length	53 cm

## Contura i21A

For additional style, Contura precast concrete modules can be covered with front panels of aluminium or black painted steel. The panels are available for horizontal and vertical inserts. The chimney can be connected at the rear edge and to the top of the insert.

Dimensions with concrete surround.

	Height	Width	Depth	Weight

i41A

# Good air circulation for efficient combustion

It is important that the fireplace is well designed. At Contura we are as proud of the inside of our inserts and cassettes as we are of the outside.

- EFFICIENT AIR FLOW**  
The room air (red arrows) flows into the stove through the air intakes on the sides. It is heated in ducts above the firebox and flows out again as hot air from the top of the stove.
- SECONDARY AIR**  
The flow of secondary air (yellow arrows) is regulated via the damper depending on the required heating output. Open damper is equivalent to maximum heat.
- PRIMARY AIR**  
The supply of primary air (blue arrows) is constant regardless of the damper position. All air for combustion can also be brought in via an air duct (option).
- CLEAN BURNING SYSTEM**  
The tertiary air (green arrows, Clean Burning) is also controlled by the damper. Clean combustion is achieved thanks to the three flows of air working together.

# Thoughtful features

Contura inserts are characterised by high quality and thoughtful design. If you choose our precast concrete modules, a firewall is included so that you can place the stove against a combustible wall. The modules are supplied unpainted. The practical, matching floor protector is a good idea if you have a floor made of wood or other sensitive material.

**STOVE DOOR**  
The door is opened by pushing it up. The door can be easily folded out at the upper edge to facilitate cleaning the inside of the glass.

**LONG LOGS**  
The insert can hold logs up to 53 centimetres in length. It creates a large, attractive fire that burns for a long time.

**LOG BOX**  
The practical, fitted log boxes can hold plenty of wood or anything else you wish to store.

**FULL COVERAGE GLASS DOOR**  
A glass door further enhances the look of the fireplace. The handle at the lower edge is discreet and matches perfectly. There is a damper under the handle that regulates the air supply to the firebox.

# Contura 11 and 21

With our precast concrete modules and front panels you can design your own fireplace. Of course, you can also cement in your fireplace yourself to give a completely personal impression.

# Dimension diagrams

A fireplace is a centre piece. The best location is, therefore, usually in the middle of a seating area. Preferably close to windows for the added advantage of enjoying the view. The stove's position also depends on where the chimney is located or where it can be installed.

Using the dimensions of the fireplace's various parts and distances to walls, floor and ceiling, you can plan where you want your fireplace more precisely and see where the chimney connection will be.

# Dimension diagrams Contura i31 and i41

A fireplace is a centre piece. The best location is, therefore, usually in the middle of a seating area. Preferably close to windows for the added advantage of enjoying the view. The stove's position also depends on where the chimney is located or where it can be installed.

Using the dimensions of the fireplace's various parts and distances to walls, floor and ceiling, you can plan where you want your fireplace more precisely and see where the chimney connection will be.

## Contura is completely Swedish!

The design and development of Contura stoves takes place in Sweden, as does the assembly of all stove parts. The products are quality controlled before leaving the factory in Markaryd. This gives us full control over the quality in all stages of production. We take care to ensure that Contura products are suitable for the modern home and conditions. We are proud to mark our products Made in Sweden?

## A Smålander that heats Europe

Contura stoves and Premodul chimneys are made by NIBE in Markaryd, in Småland. Conserving resources has always been a matter of course in Småland and that is why our manufacturing is modern, lean and efficient. Quality permeates every level of production in our factory, which is the largest and most modern facility for the manufacture of stoves and chimneys in Europe. Our products are sold throughout Europe and are appreciated for their timeless design, efficiency and high quality.
