New!

New life in the
fireplace

Heat and style for you and your fireplace

Old fashioned charm and atmosphere is wonderful. Cold, draughts and high heating costs are not.

Contura i4 transforms an old fireplace into an efficient and environmentally sound heat source, without losing its personality. Choose between a modern or a more classic design. The fire can be clearly seen in both models and lights up the entire room.

Contura i4 is designed for burning wood or smokeless fuel and it is easy to switch between fuel types.

The insert is designed for installation in Builders Opening or to build a whole new fireplace. No matter which model you choose, it is your imagination that sets the limits!

Contura i4 Classic

Packed with features

Contura is Sweden's leading stove manufacturer. If there is one thing we Swedes understand, it is the cold and how to protect ourselves against it. We always strive to improve heating efficiency so that we can save as much energy as possible. Contura i4 has been developed in that tradition, with Swedish concern for both design and technology.

Contura i4 is designed for Builders Opening, which makes it ideal to install in older houses during renovation. A high positioned damper and handle make it easy to manage the fire. The cast iron door is solid and easy to open and close. The ash pan has a large capacity and is easy to empty. The efficient firebox with convection heating means that you get a lot of heat out of the fuel, whether you burn wood or smokeless fuel.

A painting we
never get tired of

The insert in our new chimneybreast has become a brilliant and vivid painting. It sits high up so the fire can be seen throughout the room. We never get tired of it, it is just as good after the fire has gone out and we sleep soundly in the lingering heat from the chimneybreast.

Old style and modern design – we love it!

We wanted to preserve the feel of the old house we bought, but not live in a museum. Saving the old woodwork was obvious, but we wanted to give the old coal-burning stove a modern and discrete style. It should be obvious that it is modern and has efficient technology! The large glass door lets the beautiful fire really come into its own. The heat output actually surprised us, and it's a bonus that it can be fired in such an environmentally friendly way.

My fire transcends
the boundary
between tradition
and modern design.

I really have a passion for our traditions and go mad at flea markets and in antique shops. Why buy new and mass-produced when there are so many beautiful, old things of much better quality? There are limits however, our forefathers were not superior at everything. How lucky then that it is possible to combine good, old tradition with new and better technology, without losing the English classical expression.

Light with the environment in mind

Everything we do has an impact on the environment in some way. Today, we often have the opportunity to influence to what extent. One way to contribute to a reduced environmental impact when choosing a stove is to choose one that is made in an environmentally friendly way.

Contura stoves are manufactured according to Sweden's toughest environmental standards for production and use. The product can be recycled without the spread of toxic substances. The requirements for efficient combustion are also high. It is during combustion that unhealthy particulates and hydrocarbons are formed. Contura stoves are CO₂-neutral, because the carbon dioxide produced during the efficient combustion of bioenergy is taken up in the corresponding quantity when new trees are growing. By lighting, you get a natural supporting heat, which relieves the load on the house's main heating. It benefits both you and the environment.

Smoke Control Area

The Contura i4 Series is exempt for use in a Smoke Control Area when using wood fuel of 20% moisture content or less. Using quality, dry biomass wood fuel is important for the clean and efficient operation of your stove; better for you and better for the environment!

5-year warranty

When you buy a complete stove from Contura you always get a five-year factory warranty. Good service and parts availability are additional assurances during the service life of the stove.

Safety tested

CE marking is an important part of EU product legislation and includes construction products, machinery and toys. The CE mark certifies that the product meets the most important characteristic, namely, safety. All products made by Contura and Premodul are CE marked.

Easy to fit, easy to like

Contura i4 is available in three versions: Modern for own recessing, Classic and Modern for installation in Builders Opening. The inserts consist of a convection box and a firebox. The convection box is easy to install, adjust and connect to the chimney, either straight up or at a 45° angle diagonally backwards. It is also possible to con-

nect outdoor air for combustion. The firebox is docked inside the box and can be lifted out without affecting the chimney installation. Effective convection technology makes heating quick. Contura i4 is approved for use in Smokeless zones.

Ci4 Modern

Contura i4 Modern, four-sided frame

For own recessing. Rectangular cast iron frame (635x490mm) with removable handle. Damper at the upper edge. Grate and ash pan. Black or grey.

Ci4 Modern

Contura i4 Modern, three-sided frame

For installation in Builders Opening. Three-sided cast iron frame (590x490mm) with removable handle. Damper at the upper edge. Grate and ash pan. Black or grey.

Ci4 Classic

Contura i4 Classic

For installation in Builders Opening. Cast iron front (600x490mm) with integrated handle. Damper at the upper edge. Grate and ash pan. Black.

& CLOSING THE
DOOR

Attention to detail

Contura places great importance on design and function, down to the smallest detail. The cast iron door can withstand the heat and stay air-tight so you have full control of the fire. Several other parts are also made of cast iron: the frames, the hearth bottom, grate and wood support. High positioned handle and damper makes it easy to manage the fire. On the Classic models the handle is integrated in the door, on the Modern models it is removable. Most attractive with or without? You decide!

The stainless steel ash pan is large and does not need frequent emptying, perfect for those who usually use smokeless fuel.

Contura is completely Swedish!

The design and product development of Contura stoves occurs in Sweden, as does the assembly of all stove parts. The stoves are checked thoroughly before leaving the factory in Markaryd. This gives us full control over the quality in all stages of production. We take care to ensure that the stoves are suitable for the modern home and conditions. We are proud to mark our stoves "Made in Sweden". Design is an important aspect when developing our products. This is why the design of our stoves is protected.

Contura is the leading manufacturer of stove products in the Swedish market and one of the leading manufacturers in Europe. Contura is part of the NIBE group, which has 6,000 employees and a turnover of approximately 6 billion SEK.
